Precautionary Measures Before a Typhoon

Repair leaking roofs and broken windows.
Strengthen house posts if there are any.
Stock up an adequate supply of rice and canned goods.
Stock up a sufficient supply of drinking water.
Prepare flashlights and batteries.
Prepare matches and kerosene lamps in anticipation of power failures.
Remind family members of the necessary precautionary measures to be observed.

Precautionary Measures During a Typhoon

1. Listen to the latest news about the typhoon.
2. If your house is well built and located in a high place, stay in it.
3. If outside your home, stay away from electrical posts.
4. Stay away from places where a landslide is likely to occur.
5. If in an evacuation center, stay in it until it is safe to return home.
6. If your place is flooded, be sure to boil your drinking water.

Precautionary Measures After a Typhoon

1. Have a knowledgeable person inspect electrical connections before using electrical appliances.
2. Stay away from dangling electrical wires on the street.
3. Make necessary repairs in the house.
4. Continue to boil drinking water.
5. Avoid playing in the flood.

What is a Typhoon

Typhoon is the term used for tropical cyclones in the region of the Philippines.

A tropical cyclone is a warm storm system fueled by thunderstorms near its center.

It feeds on the heat released when moist air rises and the water vapor in it condenses.

Public Storm Warning Signals

PSWS no.1: a tropical cyclone with winds of 30 to 60 kph may be expected in locality in at least 36 hours.

PSWS no.2: a moderate tropical cyclone with winds around 60 to 100 kph may be expected in at least 24 hours.

PSWS no.3: a strong tropical cyclone with winds around 100 to 185 kph may be expected in 18 hours.

PSWS no.4: a very dangerous and highly destructive situation with a strong typhoon, winds more than 185 kph may be expected in 12 hours.

PRECAUTIONARY MEASURES BEFORE, DURING AND AFTER A TYPHOON

Typhoon can destroy property and lives. It is necessary to people to learn what to do to lessen the ill affects.

BEFORE A TYPHOON

1. Repair leaking roofs and broken windows.
2. Strengthen house post.
3. Stock some rice and goods.
4. Stock some drinking water.
5. Prepare flashlights and batteries, matches and kerosene when needed.
6. Remind the family that the typhoon is should be observed.

DURING A TYPHOON

1. Listen to the latest news about the typhoon.
2. Be sure that your house is well built and located in a high place and stay on it.
3. Stay away from places where landslide

occurs.

4. Stay in the evacuation center if the typhoon is not already gone or stay in your houses.
5. Stay away from electric posts.
6. If you are on a flooded place, be sure to boil your drinking water.

AFTER A TYPHOON

1. Call an electrician to inspect your electrical connections before using electrical appliances.
2. Stay away from dangling wires.
3. Make necessary repairs in the house.
4. Continue to boil the drinking water.
5. Avoid playing in the flood

What is a tropical cyclone?

A tropical cyclone is an area where the air pressure is much lower than in the surrounding area. It is brought about by rising warm air. The air surrounding it flows toward the low pressure area. But because of the Coriolis effect again, the incoming wind does not flow straight into the low pressure area; it curves. If the area is in the Northern Hemisphere, the incoming wind flows counterclockwise. Therefore, a tropical cyclone is one that forms over warm oceans in the tropics.
