

Abstract – Pat Yongpradit

This presentation introduces the essential components for providing guidance on Artificial Intelligence (AI) in education, beginning with an overview of the TeachAI toolkit. The presentation focuses on two critical principles: enhancing AI literacy among students and teachers and understanding how to mitigate the risks of AI in order to realize the benefits. It underscores the importance of a solid foundation in computer science. A balanced approach towards understanding the benefits and risks of AI in education is advocated, providing teachers with clear, actionable recommendations for navigating these aspects in their teaching practices.
