

Description of Teacher's Guide Book

Teachers' Guide Book has two functions which are: as a major reference for students' book, and as guidance for learning and teaching in the class. This book is about the environment especially water, earth and sun. The gist of the book is about how to maintain the environment – water, earth and the utilization of sun – for future generation. In this books, there are four subthemes which will be discussed of teachers, namely water, earth, sun and natural surroundings. There some courses which will be correlated to the learning and teching materials of the book such as Bahasa Indonesia, English, mathematics, natural sciences, and so forth. Futhermore, this book explains on how to calculate creativity, knowledge and skill as well as understanding of students.

In the book, teachers are persuaded to use integrated themetic learning and teaching approach. It is because: 1) all students will easily understand factual knowledge though multisciences themes especially the environment; 2) by integrated approach, multisciences will be achieved and overlapping which always occurs on the learning will be able to be avoided. This book also elaborates minimal efforts which should be done by students to attain expected competencies. In accordance with the 2013 Curriculum, students are engaged to brave to find other learning sources such as from library, internet, magazine and others. The roles of teachers are so important in increasing and tailoring students' knowledge and understanding. This book does not restrict other activities to be done outside of the main content of the book, but it allows expanding other activities.
