

This current pandemic called COVID 19 has been giving as challenges since the very beginning of this year. And now we are in this point where we are about to welcome another school year, but we must live with this new normal. There will be adjustments, doubts, hesitations, rants, and fear. But upon watching the August 13 episode of SEAMEO Online Series, I have been relieved that there are plans and alternatives for students like me. And I think that can be called development.

The fifteen lecturers did share different topics, ideas, and point of view. I have learned so much from them. But there's this topic that I have found interesting. It was Ms. Yenni Lidyawati's presentation. I guess it will be helpful if it will be applied in the school where I am studying. Central Bicol University of Agriculture - Pasacao Campus is only offering one course---which is Education. Project Based Learning will be a good alternative for us, with this we can still practice and enhance our skills in teaching.

I do not have a bachelor's degree yet, I am also not professional in any area. But this webinar and its series are preparing me to develop my potentials, and it did also give me an additional interest to pursue the thing that I am doing. May we all survive this new normal.
