In this webinar, I've learned a lot more about management of learning. As an educator myself, I become more knowledgeable about the different platforms we can use in delivering education even with a little resource. This webinar empowers educators on how to cope with the new normal setting of education. Attending different webinars is truly helps me to become more updated with the different trends of education.

As we can see, our educational system needs to adapt the new normal setting. Yet it is very challenging and needs extra effort to achieve its goal, we as one of the educators should contribute on how to effectively deliver education to our learners. In this webinar, I learned that in delivering education, I can choose between asynchronous and synchronous learning or the combination or blended learning.

There are things to consider in order to meet the goals and objectives of our educational system. First, educator must be informed with the different modes of learning which can be learn through watching and attending webinars. Moreover, encourage the stakeholders like parents and the community to participate and help the learners to access education even in remote areas. Most importantly, conducting psychological preparedness for learners is very important too for them to overcome the difficulties they might encounter.

Some of the things that I've learned are about high-end technology tools which are available online. They can be web based or they can be downloadable like an application. Social media is very useful in delivering lesson too. Through online, learners can be taught how to be interactive too like engaging them in some interactive activities like gamification and project collaboration.

I am very thankful to be a participant of this webinar. I congratulate SEAMEO and lecturers for a very informative session.
