

This is my first time to watch a webinar by SEAMEO. Indeed, very informative and I learned a lot. Actually, I am not that good when it comes to new technology (gadgets). Most of the time, I asked my children on how to do this, how to do that...I really don't know the different apps. I'm just familiar with Facebook Messenger and Youtube. It's embarrassing to say but that's the truth. Watching this webinar opened my eyes to so many apps to use but unfortunately, here in our place majority of the learners have no cellphones or laptops to be used. So, the problem is how can we apply this to the learners? Based from the survey that we did from the parents, they wanted to use the modular learning because of lack of gadgets at home. But of course, as a teacher though we can never apply it for now to our learners, I'm so happy to have learned something new and hopefully someday. What's most important for now is to learn to accept and live the new normal life. There's no other way but to live with it and never stop educating ourselves despite this critical situation.
