

The SEA-Teacher-TVET Lecture Series are boundless brilliance of educational gifts that empowered teachers like me to broaden my learning abilities of what I have as well as my skills on what I can give and teach my learners productively this pandemic time.

The webinar topic is substantial because I learned to utilize Technology effectively applying the Modern Agriculture. This webinar incorporates the magical tandem of our technological advancement and modernized agricultural practices in which, useful to impart to our learners who are mostly belong to Generation Z.

I am appreciative in such a way that the skills introduced during the webinar were relatable to our modern society. The learners are blessed to be knowledgeable enough to use what they learned in their respective lives for livelihood and even placing them for good job opportunities.
