

## **SEAMEO WEBINAR**

**August 20, 2020**

### **TEACHING TECHNOLOGY AND AGRICULTURE IN THE NEW NORMAL**

Your webinar on teaching technology and agriculture was very informative and packed full of learnings. Our school will be using the modular teaching method, which will make use of printed modules made by the teacher which will then be distributed to the students for their learning and assessment, thus I can still apply the Digital Communication with my students and their parents. I am very grateful for the additional knowledge I acquired from you.

As a teacher in dressmaking, majority of the topics covered in this webinar could not be covered under my teaching profession but it will surely be of use to me personally, especially the urban farming, digital communication and tending technologies.

With the learnings I acquired, I have gained confidence in facing the challenges under the new normal. The various online learning techniques may not have use for me right now but with the ideas I gathered here, I can say that I will be prepared if ever our school will shift to online learning in the future.

Your webinars give us teachers new ways to explore and face the challenges that comes with adapting to the new normal. More power to SEAMEO!
